Water Bottle & Filter
USER INSTRUCTIONS
Technologies, Inc.

1) Screw off the cap and remove the filter from the neck of the bottle (Fig 1).

2) Remove sticker from the top of filter.

3) Fill the bottle with water (Fig 2).

4) Replace the filter into the neck of the bottle.

5) Open the protective cover on the push-pull cap (Fig 3).

6) Pull the cap to the open position (Fig 4).

7) Invert the bottle and squeeze water out of the bottle to wet the filter (Fig 5).

NOTE: The first time you use the bottle you may notice a small amount of harmless carbon dust in the water stream. Continue to squeeze water out until the water stream clears up.

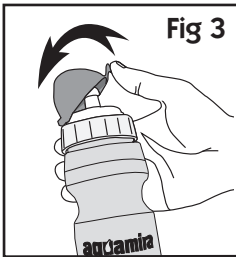

Fig 3

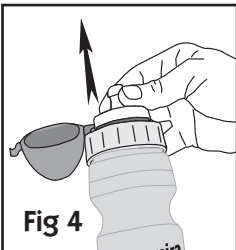

Fig 4

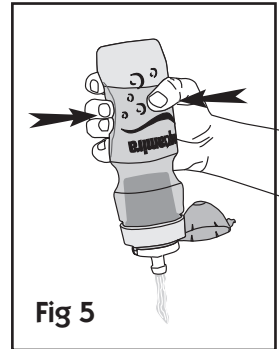

Fig 5

You may also notice that it is difficult to squeeze and that there is little water flow. This is typical when the filter is new or thoroughly dry. The filter will become easier to squeeze and the flow will improve once the water has replaced all the air trapped within the microscopic pores and the filter is thoroughly wetted.

IMPORTANT: DO NOT REMOVE THE SILICONE VALVE ON THE BOTTOM OF THE FILTER. This will compromise the integrity of the filter and will allow contaminated water to by-pass the filter.

8) To drink; Squeeze on the bottle while sucking on the push pull cap. Make sure the cap is in the "OPEN" position when drinking.

9) Close cap when finished.

**DO NOT REMOVE
SILICONE VALVE**
